# TETRA Terminal Interoperability Certificate

September 2003

**TELTRONIC**

Manufacturer	Type	Software/Hardware Release No.	Period of testing
<b>Teltronic</b>	<b>MDT-400</b>	<b>HW: Ver 00.05; SW: 07.01.01;</b>	<b>17-19/9/2003</b>

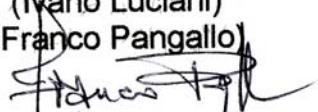

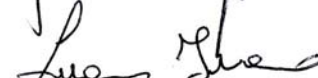

ISCTI (Istituto Superiore delle Comunicazioni e delle Tecnologie dell'Informazione) has witnessed that the Teltronic MDT-400 is operating in accordance with:

## TETRA Interoperability Profile:

TETRA MoU, TTR001-01, Core, Ver. 3.0.13, June 2001  
TETRA MoU, TTR001-02, SDS, Ver. 1.0.1, August 2001  
TETRA MoU, TTR001-03, DGNA, Ver. 1.0.3, May 2001  
TETRA MoU, TTR001-05, Packet Data, Ver. 1.0.0, November 2000  
TETRA MoU, TTR001-07, FSSN, Ver. 1.0.0, January 2002  
TETRA MoU, TTR001-09, Ambience Listening, Ver. 1.0.3, January 2002  
TETRA MoU, TTR001-11, Air Interface Encryption, Ver. 1.0.0, December 2001

The test results for the tested features can be found in the tables of this certificate.

Authorised IOP test engineer

## Information on the equipments used for testing in the September 2003 IOP Test Session

The tests were performed using the following SwMI:

Manufacturer	Type	Software/Hardware Release No.
Nokia SwMI	NTS 3.0	Exchange: HW: DXT256 SW: W3 6.7-3 Base Station: HW: TBS400 TBC SW: 6.57-0 (Base Station controller) TBBM SW: 3.51-0 (Transceiver unit)

### Additional information about the test performed

The tests were performed in the LA1 and LA2 sites. The SwMI was operating with the following configuration:

MCC	346
MNC	5
Colour code	1 (LA1) and 2 (LA2)
LA1 carrier frequency (BS Tx)	395,1875 MHz
LA2 carrier frequency (BS Tx)	395,4125 MHz
PSTN gateway ISSI	16777184
Subscriber classes	FFFF <sub>16</sub>

**Note:** TIP compliance testing focuses on functionality on the OSI model layers two, three and higher and therefore is frequency band independent.

## IOP Test Plans used for testing

The following Test Plans were used in the Test Session:

TETRA MoU, IOP001-01, Core, Ver. 1.1.0

TETRA MoU, IOP001-02, SDS, Ver. 1.1.0

TETRA MoU, IOP001-03, DGNA, Ver. 1.1.0

TETRA MoU, IOP001-05, Packet Data, Ver. 1.1.0

TETRA MoU, IOP001-07, FSSN, Ver. 1.1.0

TETRA MoU, IOP001-09, Ambience Listening, Ver. 1.1.0

TETRA MoU, IOP001-11, Air Interface Encryption, Ver. 1.1.0

## Test Results

The test results are shown in the tables below.

Test results and the certificates from previous IOP test session are available on TETRA MoU web site (<http://www.tetramou.com/interoperability>).

Tables indicate whether or not tests addressing a specific requirement of the TIP specification have been performed, whether or not the requirement is applicable for the SwMI, and the result of the test if executed. Each entry of the table may take one of seven values:

-	No test performed.
<b>N/A</b>	Not applicable for the SwMI
<b>No</b>	Not supported by Terminal
<b>NTPA</b>	No Test Plan/case Available
<b>P</b>	Pass
<b>F</b>	Fail
<b>I</b>	Inconclusive

The test results have been derived from examining the behaviour of a live system. The verdicts indicated are based on the log evaluation of the information exchange between the SwMI and the terminals indicated in the following tables. The verdicts reflect the fact that at the time of the IOP testing it was/was not possible to demonstrate a behaviour that was in accordance with the related requirement.

ISCTI has made every effort to ensure that tests are in accordance with the relevant TIPs. ISCTI has no liability for the test results, or towards the manufacturers.

**COMMENTS:**

**TELTRONIC MDT-400**

- Pr** Regression test
- P1** MS A responds to SwMI initiated SN-PAGE REQUEST with SN-PAGE RESPONSE PDU (PD Service Temporarily unavailable), then MS A sends AL-SETUP (reset) to reset the AL, instead AL-RECONNECT.
- F1** The SwMI in D-SDS DATA includes unnecessarily FID to calling party identifier (15117111 instead 15000111) when sending inside the same fleet. This problem does not cause an operational issue. Calls/actions were performed successfully.
- F2** SwMI does not send AL-DISC 'Success' for MS initiated advanced link disconnection. MS repeats AL-DISC 'Close' five times before sends SN-DEACTIVATE PDP CONTEXT ACCEPT and PDP context is released.
