TETRA Terminal Interoperability Certificate

April 2005

SEPURA

Manufacturer	Type	Software/Hardware Release No.	Period of testing
Sapura	SRP3000	SW: TBA HW: TBA	13-15 April 2005

ISCTI (Istituto Superiore delle Comunicazioni e delle Tecnologie dell'Informazione) has witnessed that the Sepura Terminal is operating in accordance with:

TETRA Interoperability Profile:

TETRA MoU, TTR001-01, Core, Ver. 4.8.1, February 2003
TETRA MoU, TTR001-02, SDS, Ver. 1.0.1, August 2001
TETRA MoU, TTR001-03, DGNA, Ver. 1.0.3, May 2001
TETRA MoU, TTR001-04, Authentication, Ver. 1.0.0, November 2000
TETRA MoU, TTR001-05, Packet Data, Ver. 1.0.0, November 2000
TETRA MoU, TTR001-11, Air Interface Encryption, Ver. 1.0.0, December 2001
TETRA MoU, TTR001-12, Service Interaction, Ver 1.0.0, December 2003

The test results for the tested features can be found in the tables of this certificate.

Issue 01: 2005/12/05 that updates the previous version of the certificate according to List of Revisions on Annex 1

Authorised IOP test engineer

Information on the equipments used for testing in the April 2005 IOP Test Session

The tests were performed using the following SwMI:

Manufacturer	Type	Software/Hardware Release No.
Nokia	NTS 4	SW: w4 5.10-4 HW: DXT256

Additional information about the test performed

The tests were performed in the LA1, LA2 and LA3 sites. The SwMI was operating with the following configuration:

MCC	346
MNC	5
Colour code	1 (LA1) 2 (LA2) and 3 (LA3)
LA1 carrier frequency (BS Tx)	395,1875 MHz
LA2 carrier frequency (BS Tx)	395,4125 MHz
LA3 carrier frequency (BS Tx)	395,9375 MHz
PSTN gateway SSI	16777184 (FFFFE0)
Subscriber classes	FFFF ₁₆

Note: TIP compliance testing focuses on functionality on the OSI model layers two, three and higher and therefore is frequency band independent.

IOP Test Plans used for testing

The following Test Plans were used in the Test Session:

TETRA MoU, IOP001-01, Core, Ver. 2.0.0

TETRA MoU, IOP001-02, SDS, Ver. 1.1.0

TETRA MoU, IOP001-03, DGNA, Ver. 1.1.0

TETRA MoU, IOP001-04, Authentication, Ver. 1.1.0

TETRA MoU, IOP001-05, Packet Data, Ver. 1.1.0

TETRA MoU, IOP001-11, Air Interface Encryption, Ver. 1.1.0

TETRA MoU, IOP001-12, Service Interaction, Ver. 1.0.0

Test Results

The test results are shown in the tables below.

Test results and the certificates from previous IOP test session are available on TETRA MoU web site (<http://www.tetramou.com>).

Tables indicate whether or not tests addressing a specific requirement of the TIP specification have been performed, whether or not the requirement is applicable for the SwMI, and the result of the test if executed. Each entry of the table may take one of seven values:

-	No test performed.
N/A	Not applicable for the SwMI
No	Not supported by Terminal
NTPA	No Test Plan/case Available
P	Pass
F	Fail
I	Inconclusive

The test results have been derived from examining the behaviour of a live system. The verdicts indicated are based on the log evaluation of the information exchange between the SwMI and the terminals indicated in the following tables. The verdicts reflect the fact that at the time of the IOP testing it was/was not possible to demonstrate a behaviour that was in accordance with the related requirement.

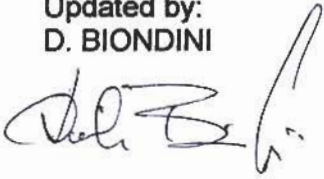

ISCTI has made every effort to ensure that tests are in accordance with the relevant TIPs. ISCTI has no liability for the test results, or towards the manufacturers.

Comments

- Note Entering fallback the SwMI sends an SDS-TL message instead of the precoded status message.
- Note 1 Authentication test case equivalent to 1.1.1 was performed during AIE test 2.1.1 for class 3 MS
Authentication test case equivalent to 1.1.3 was performed during AIE tests 2.2.1 to 2.2.4.2 for class 3 MS, whereas the SwMI request MS to authenticate.
- P1 After LA 1 re-configuration MS re-registers sending U-LOCATION UPDATE with "roaming location update" instead of "periodic location updating" element.
- P2 The reject reason is "MS not provisioned for Packet Data" instead of "Access point name index not correct" as is stated in the test case.
- P3 The test has been performed using unannounced cell re-selection instead of announced, U-PREPARE PDU is missing in LA 1.
- F1 Although in the ready state, the SwMI sends an SN-DATA TRANSMIT REQUEST, after which the MS cannot send the appropriate link reconnection message as the protocol exchange fails, the data transfer did continue.
